MAIT DELHI · OPEN CIRCLE · HACK THE CIRCLE 2026

# FraudShield India

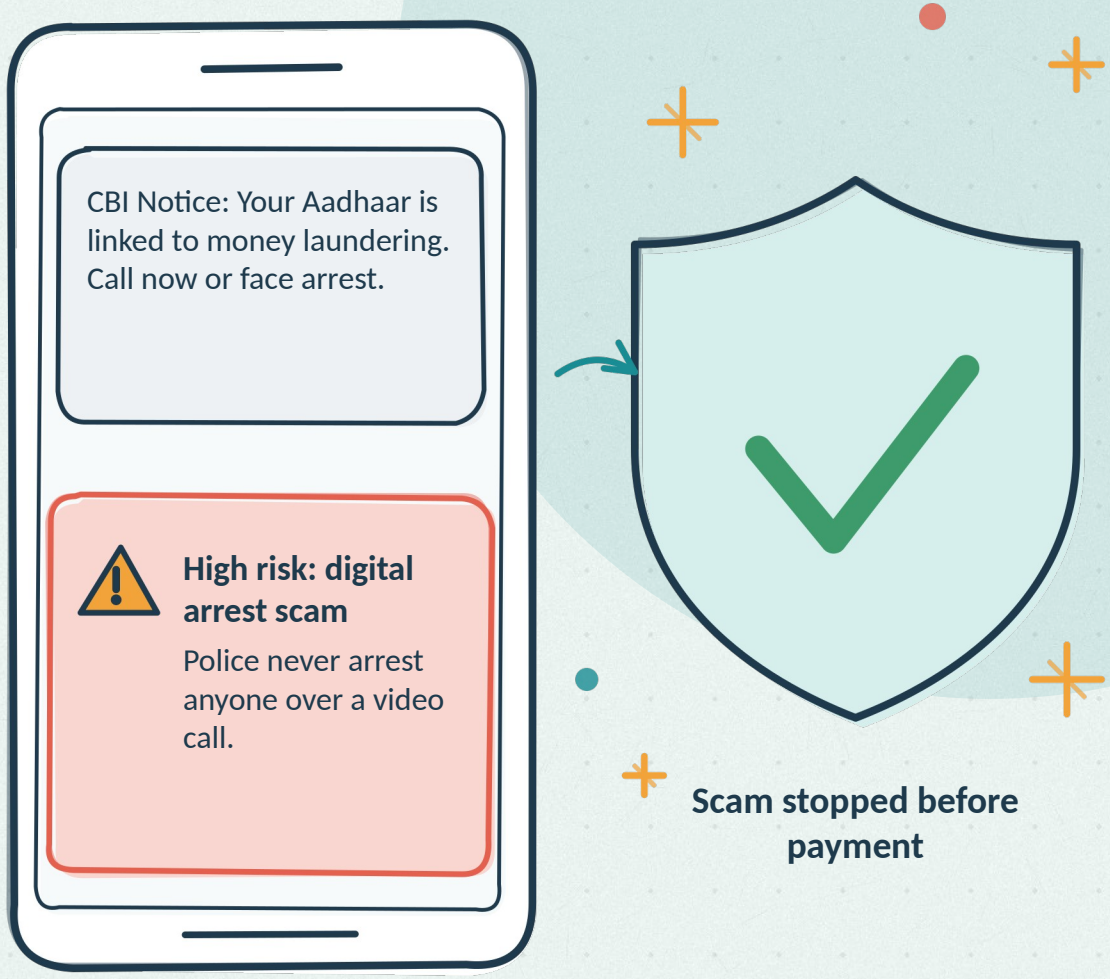

An open-source AI guardian that spots ‘digital arrest’ and UPI scams on your phone, before you pay.

- 100% open-source (MIT)
- Runs on your device
- Zero data stored
- Drafts a 1930 report

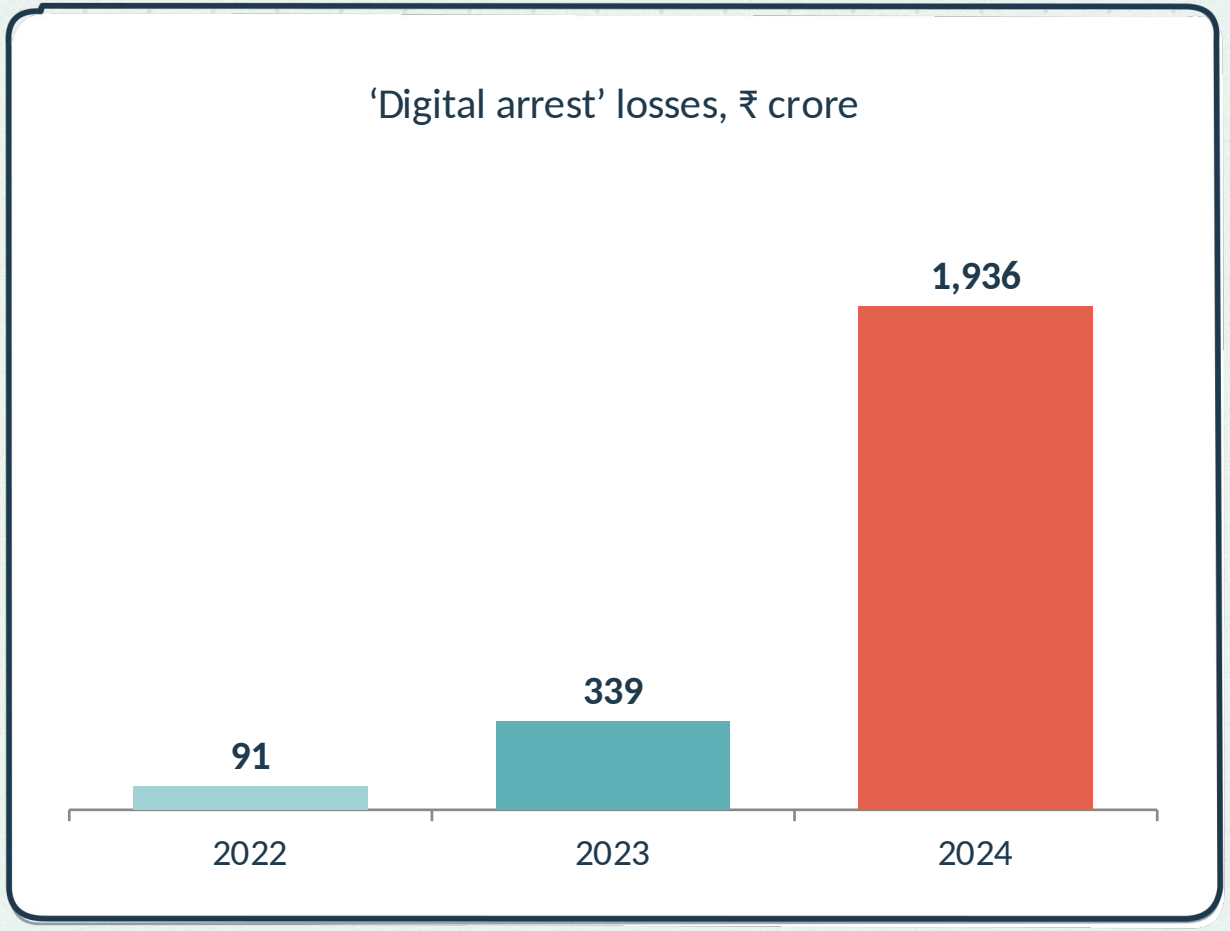

Track: AI/ML & Cybersecurity

# India is losing crores to fake-police scams

**₹4,057 Cr**

lost to ‘digital arrest’ scams from 2022 to May 2026, across 2.98 lakh complaints.

**Not a real law**

No agency can arrest anyone over a call or video call. ‘Digital arrest’ does not exist in Indian law.

**1 in 5**

UPI-user families faced fraud in three years, and 51% of victims never reported it.

Sources: I4C data reported by News18 (Jul 2026); Cybersecify (yearly losses); LocalCircles survey via Business Standard.

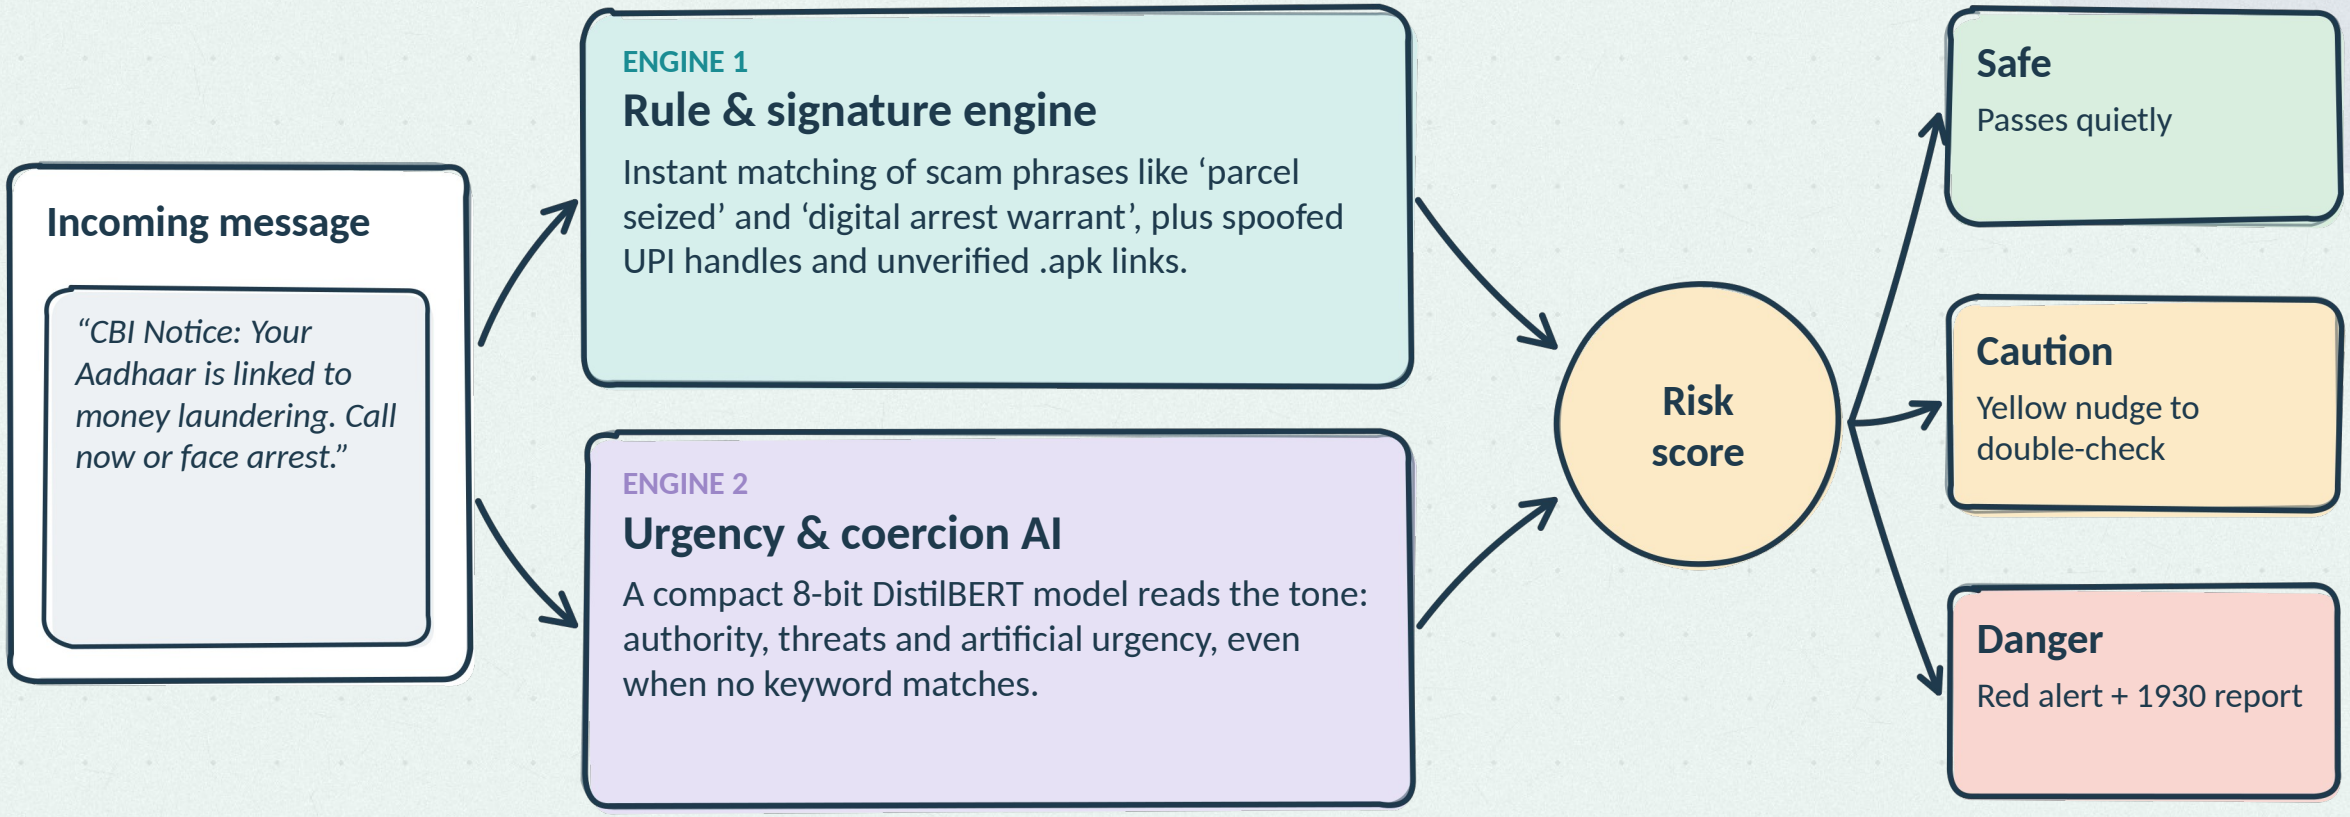

# How the scam unfolds, and where we step in

Scammers follow the same script every time, so the script itself is the clue.

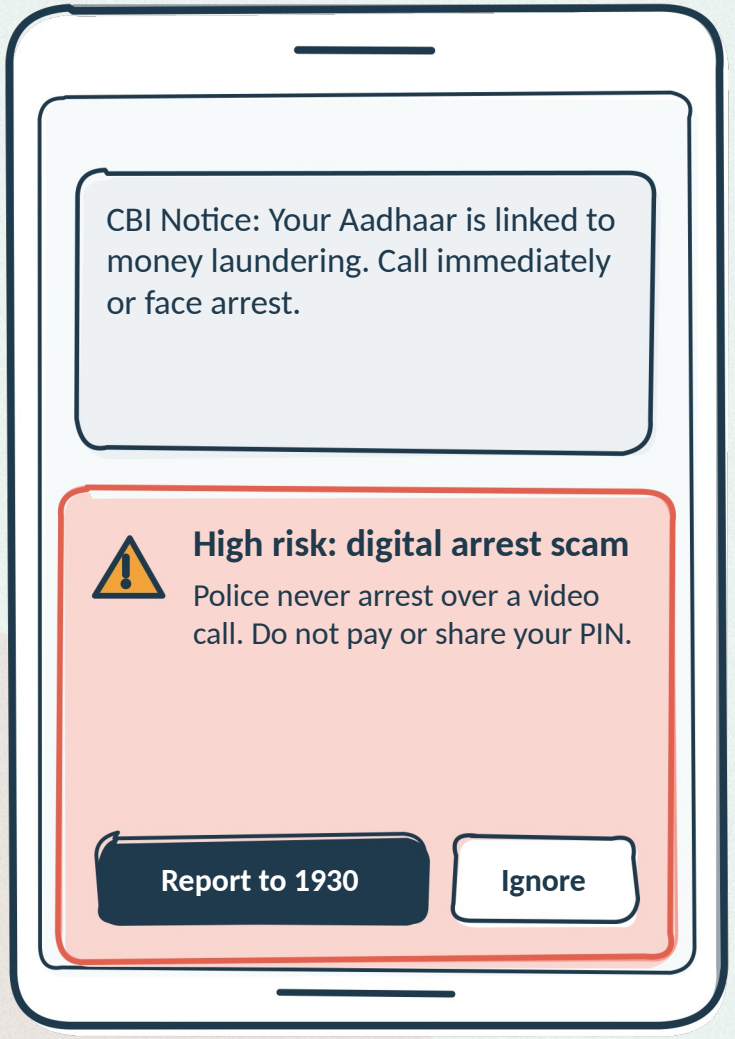

**Why firewalls miss it:** they scan files and phone numbers, and scammers change numbers and UPI IDs within minutes. The language of fear and urgency stays the same, so FraudShield reads the language.

# Inside FraudShield: two engines, one verdict

**Everything runs on the device: nothing is stored and no personal data is logged.**

# A scam message, caught in real time

1

## FraudShield reads it

The message is checked on your phone as it arrives. Nothing is saved or sent anywhere.

2

## It spots the pattern

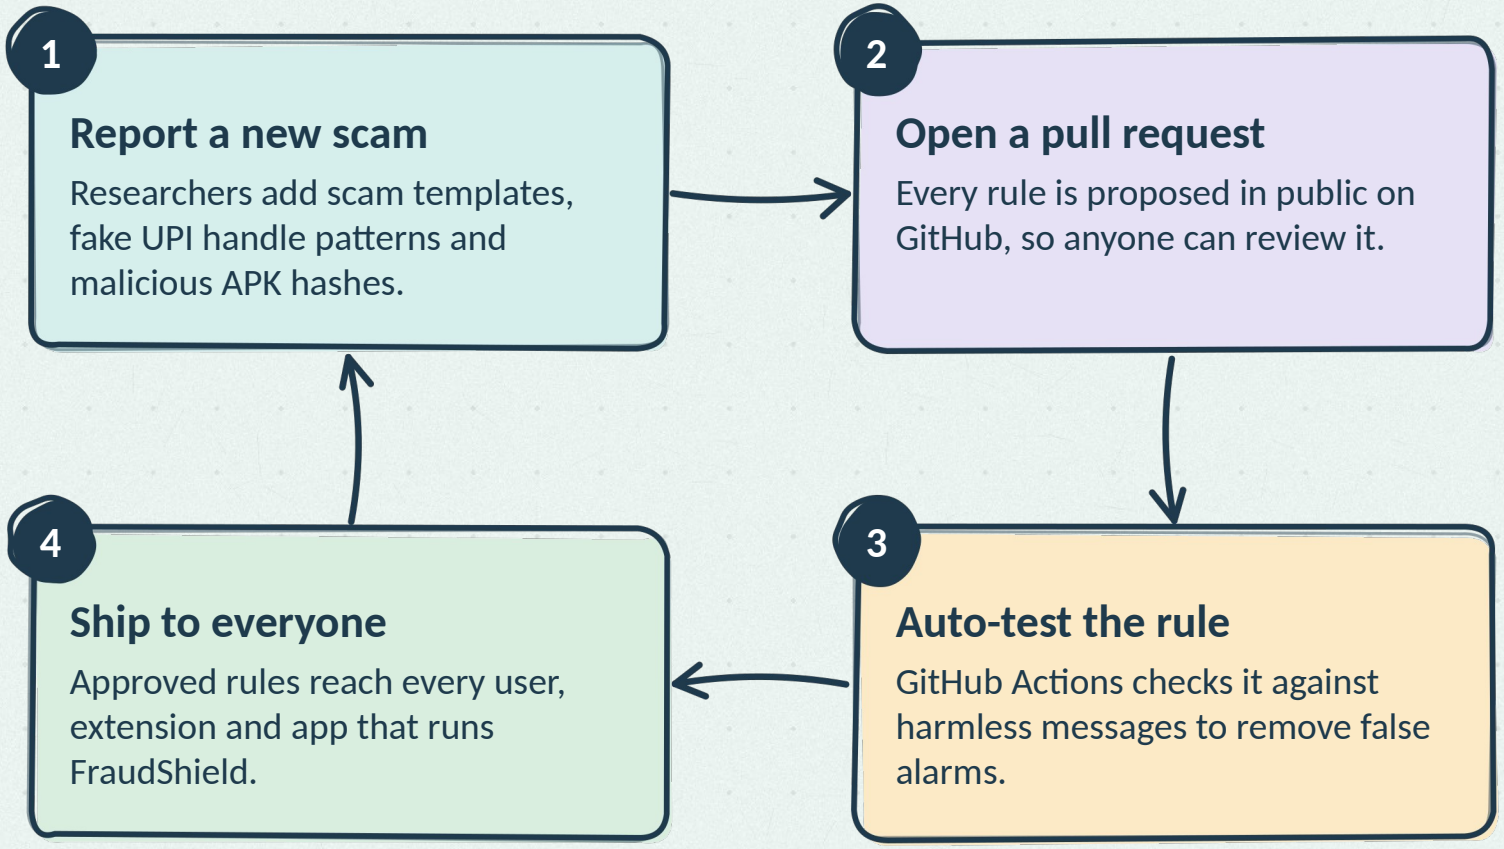

Rules catch ‘CBI’ + ‘Aadhaar’ + ‘arrest’, and the AI confirms the threatening, urgent tone.

3

## It warns and helps you report

A red warning appears before you reply or pay. One tap drafts a complaint for 1930 and cybercrime.gov.in.

# Every new scam we learn protects everyone

## Build on it

An open SDK: a Python package and a Chrome extension for any civic or fintech platform.

```
pip install fraudshield
```

MIT licensed: free to use, audit and improve.

Works on-device: nothing leaves the phone.

**Result: rules keep pace with new scam scripts, and nobody’s private messages are ever collected.**

# Light, fast and private by design

**Interface**
Chrome extension (Manifest V3) · Next.js 14 · Tailwind CSS

**Backend**
FastAPI (Python 3.11) · Redis caching

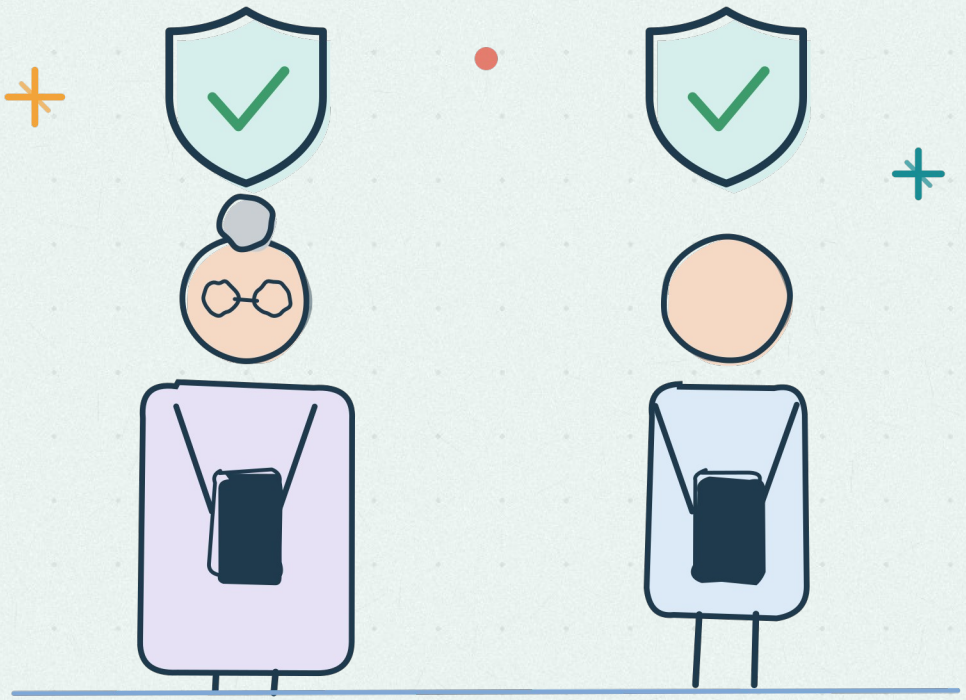

**AI model**
Quantized DistilBERT (8-bit) on ONNX Runtime, built for edge devices with no GPU

**< 45 ms** target API latency per query; rules engine under 10 ms

**8-bit** model quantization, so it runs without a high-end GPU

**0** messages stored, zero telemetry

# Protecting the people scammers target most

350M+ UPI users in India (2024): every one is a possible target.

### Built for the most targeted

Senior citizens and first-time internet users, whom scammers pressure the hardest.

### A bridge to law enforcement

Drafts a complaint for the National Cybercrime Reporting Portal and the 1930 helpline in one tap, while money can still be frozen.

**Language is the last clue we can catch before the money moves.**
